Projects

LED Display Construction & Home Automation

INDEPENDENT LOCKDOWN PROJECT

Apr. 2020 - Jul. 2020

- Built a 42×24 Wi-Fi controlled LED display using commonly available LED strips. Core features include in-room music visualization using FFT, image cast, animations, etc. Final size equivalent to a 32" TV, and able to achieve 60 FPS.
- Made my own smart switches using electronic relays and micro-controllers. Core features include a small size to fit inside a common switch-board and a significantly lower price than (10x) commercial solutions. Bundled everything together with an in-house android application.

Generative models for Stochastic Point Processes

INDEPENDENT REMOTE COLLABORATION WITH Prof. Giuseppe Manco

Jan. 2019 - Dec. 2019

- Leveraging the modelling power of weibull distributions to predict user return-time to media-streaming-services like YouTube, Netflix etc.
- Formulating and experimenting with generative models like GANs & VAEs – maximizing the likelihood of the actual return-time.

PEGASOS: Gradient based solver for SVM

OPTIMIZATION METHODS COURSE PROJECT UNDER Prof. C V Jawahar

Mar. 2019 - May. 2019

- Implemented both linear and kernelized PEGASOS, results and run-time matching with popular libraries like sklearn.
- In addition to given problem statement, exploited the concept of Gramian Matrices to speed up the learning process for kernelized PEGASOS.

Compiler for C-like language, Decaf

COURSE PROJECT UNDER *Prof. Suresh Purini*

Oct. 2018 - Dec. 2018

- Created a flex tokenizer and bison parser from a Context Free Grammar, using visitor software design pattern for modular compiler design.
- Parsed source programs into an Abstract Syntax Tree and then into LLVM intermediate representation (LLVM IR).
